Unmodified:

Modified:

Summary:
        There is a lot of data that is being processed for the webpage using many get requests. Not just the photos and text that are necessary for the page the user is viewing but also images and maybe even links that are used in the previous page viewed before. I assume this has to do with caching maybe? Making it easier to move from one page to

another a making the actual change to that page faster shaving micro seconds off the time
to load.

2. VSCode

3. Homebrew
